

ANDREA LISI

PLATFORM & GOVERNANCE · SENIOR SOFTWARE ENGINEER · VIENNA

Vienna, AT · remote / hybrid · lisandr84@gmail.com · linkedin.com/in/andrea-lisi84 · github.com/karedas · andrea-lisi.com

Eighteen years on the web, from hand-built servers to platform architecture and governance. At **Tricentis** I hold a large frontend platform together while it changes every day: the repository, the pipelines, the standards, and how the work of 12+ teams gets in. I sit between those teams as a **gateway**, and stay hands-on underneath. I treat AI as **engineering infrastructure**: the work shifted from writing to deciding, and I delegate only what I can verify. Art school is where I started, and I never stopped drawing.

AI IN PRACTICE

★ Agentic engineering

Claude Code · Cursor · Copilot as daily drivers, IDE and CI

★ Deciding, more than writing

I read and correct far more code than I write

◆ Delegate only what I can verify

not migrations that cannot be walked back

◆ Rules an agent can read

standards made strict and checkable in the pipeline

◆ Context engineering

repo-aware context and guardrails · CLAUDE.md · AGENTS.md

◆ Gated like human code

agentic reviews on the same bar, never a softer one

CORE STACK

TypeScript

React

Next.js

Nx monorepo

Remix / RR7

Vite · Webpack

Platform & Governance

2023–now

Tricentis · Tosca Cloud · Vienna, Austria · Senior Software Engineer, Staff nomination in progress

– Came in on a team holding one of Tosca Cloud's frontend applications, then two, redesigned significant parts, and was promoted into platform governance.

– Own the governance of the repository outright, with the platform architect as a two-person function for 12+ teams: what comes in and what stays out, how it is structured, and the boundaries each team works inside.

– Maintain it at the architectural level: module boundaries, dependency graph, build times and CI topology across 16 projects, with what has to fail before it reaches main.

– Package upgrades and integration platform-wide, vulnerabilities and major versions absorbed before they reach the teams; shared resources built once rather than per team, and bad practice taken apart before it sets.

– The gateway between design and the internal teams on standards: the RFC process, the changes that cross team boundaries, and the fix when something blocks everyone.

feat/ai-augmented-engineering → merged into main

– Our team is tasked with how the company's AI push lands across the monorepo: direction from staff engineering, the how is ours to set, for all 12+ teams.

– Adapt the codebase for a contributor that is not a person: the rules that once merely guided humans now run strict and checkable, because an agent does not sense them, it reads them.

– Integrate what earns its place, from Claude and Cursor to agentic reviews and pipeline checks, on the same gates as human code.

AI-AUGMENTED DELIVERY: HOW I WIRE IT

repo context

CLAUDE.md · AGENTS.md

agents

IDE · CI orchestration

eval gates

quality bars · AI review

main

same bar as human code

telemetry · eval results · review outcomes feed the next iteration

Agents work with the platform's context and rules baked in (CLAUDE.md, AGENTS.md, pipeline-level rule systems); every AI-generated change lands through the same standards, reviews and gates as human code. That is the governance part of the job.

Frontend Developer

2019–2023

Treedom · Florence, Italy · e-commerce platform for tree planting

– Joined to reinforce two developers on the storefront, then rewrote it and drove the full migration off the monolith, owning the frontend track with React, Vue and GraphQL.

– Core team of four: the foundations we laid held as the company scaled from ~20 to 150+ people, with IT growing to 25 developers.

– Built high-traffic campaign pages for a platform that planted millions of trees, then in my last year built the backend of the internal systems from scratch, the ones the foresters run the tree operation with, inside a backend team while coming from the frontend.

2017-2019

- Modernized a **legacy ASP e-commerce end to end**: an incremental migration first to jQuery, then to **React with a Webpack toolchain**.
- The backend came with it: a **custom CMS** that ran the orders and the daily life of the shop, down to the database integration.
- Kept a live luxury shop shipping features throughout the transition, while the stack changed underneath it.

2007-2017

- Hired as the studio's designer: **prototypes, print work and visual identities drawn from scratch** for every client project, never assembled from bought templates (Adobe Suite).
- Grew into the **on-premise infrastructure technician**: servers, networking and firewalls designed and installed inside client companies, notably manufacturers in Tuscany's leather and fashion district. I learned networking with my hands on it.
- A decade owning **every step for dozens of clients**, from small shops to corporate: from the first sketch of a brand to the servers it ran on.
