

# ANDREA LISI

PLATFORM & GOVERNANCE · SENIOR SOFTWARE ENGINEER · VIENNA

Vienna, AT · remote / hybrid · lisandr84@gmail.com · linkedin.com/in/andrea-lisi84 · github.com/karedas · andrea-lisi.com

Eighteen years on the web, from hand-built servers to platform architecture and governance. At **Tricentis** I hold a large frontend platform together while it changes every day: the repository, the pipelines, the standards, and how the work of 12+ teams gets in. I sit between those teams as a **gateway**, and stay hands-on underneath. I treat AI as **engineering infrastructure**: the work shifted from writing to deciding, and I delegate only what I can verify. Art school is where I started, and I never stopped drawing.

|                         |                                |                          |                                    |

AI IN PRACTICE

★ Agentic engineering

Claude Code · Cursor · Copilot as daily drivers, IDE and CI

★ Deciding, more than writing

I read and correct far more code than I write

◆ Delegate only what I can verify

not migrations that cannot be walked back

◆ Rules an agent can read

standards made strict and checkable in the pipeline

◆ Context engineering

repo-aware context and guardrails · CLAUDE.md · AGENTS.md

◆ Gated like human code

agentic reviews on the same bar, never a softer one

CORE STACK

Platform & Governance

2023–now

Tricentis · Tosca Cloud · Vienna, Austria · Senior Software Engineer, Staff nomination in progress

Came in on a team holding one of Tosca Cloud's frontend applications, then two, redesigned significant parts, and was promoted into platform governance.

Own the governance of a micro-frontend monorepo: 16 projects, 12+ teams, one product. What comes in and what stays out, how it is structured, and where boundaries run.

Maintain it at the architectural level, a two-person function with the platform architect: module boundaries, dependency graph, build times, CI topology, and what has to fail before main.

Package upgrades and integration platform-wide, with the breakage absorbed before it reaches the teams; shared resources built once rather than per team, and bad practice taken apart.

The gateway between design and the internal teams on standards: the RFC process, the changes that cross team boundaries, and the fix when something blocks everyone.

feat/ai-augmented-engineering → merged into main

Our team is tasked with how the company's AI push lands across the monorepo: direction from staff engineering, the how is ours to set, for all 12+ teams.

Adapt the codebase for a contributor that is not a person: the rules that once merely guided humans now run strict and checkable, because an agent does not sense them, it reads them.

Integrate what earns its place, from Claude and Cursor to agentic reviews and pipeline checks, on the same gates as human code.

AI-AUGMENTED DELIVERY: HOW I WIRE IT

repo context

agents

eval gates

main

telemetry · eval results · review outcomes feed the next iteration

Agents work with the platform's context and rules baked in (CLAUDE.md, AGENTS.md, pipeline-level rule systems); every AI-generated change lands through the same standards, reviews and gates as human code. That is the governance part of the job.

Frontend Developer

2019–2023

Treedom · Florence, Italy · e-commerce platform for tree planting

Joined to reinforce two developers on the storefront, then rewrote it and drove the full migration off the monolith, owning the frontend track with React, Vue and GraphQL.

Core team of four: the foundations we laid held as the company scaled from ~20 to 150+ people, with IT growing to 25 developers.

Built high-traffic campaign pages for a platform that planted millions of trees, then in my last year built the backend of the internal systems from scratch, the ones the foresters run the tree operation with, inside a backend team while coming from the frontend.

### Frontend Developer

**Forzieri.com** · Florence, Italy · luxury e-commerce

- Modernized a **legacy ASP e-commerce end to end**: an incremental migration first to jQuery, then to **React with a Webpack toolchain**.
- The backend came with it: **a custom CMS** that ran the orders and the daily life of the shop, down to the database integration.
- Kept a live luxury shop shipping features throughout the transition, while the stack changed underneath it.

02

œuf à la neige

### Head of Web · Full-Stack Designer

**Easysystem** · Figline Valdarno, Italy · web agency & IT services

- Hired as the studio's designer: **prototypes, print work and visual identities drawn from scratch** for every client project, never assembled from bought templates (Adobe Suite).
- Grew into the **on-premise infrastructure technician**: servers, networking and firewalls designed and installed inside client companies, notably manufacturers in Tuscany's leather and fashion district. I learned networking with my hands on it.
- A decade owning **every step for dozens of clients**, from small shops to corporate: from the first sketch of a brand to the servers it ran on.

/ SIDE PROJECTS

**Lumina** · [luminamud.com](#)  
A fantasy MUD where words shape the world. Node.js, MongoDB, Socket.io, React, Cloudflare; built end to end with the same AI-augmented workflow I use at work.

**Lockhound** · [github.com/karedas/lockhound](#)  
Zero-dependency CLI (npx lockhound) that finds and kills the Windows processes locking a folder, via the Restart Manager API.

/ EDUCATION

**IFTS Advanced Technical Certificate**, Software Development: Java web application programmer diploma.

**Diploma in Arts**, Istituto d'Arte di Firenze. Drawing first, then years of the violin. I never stopped, and it is where the design half of this CV comes from.
