

# ANDREA LISI

STAFF FRONTEND ENGINEER · VIENNA

Vienna, Austria · remote / hybrid   lisandr84@gmail.com   www.andrea-lisi.com   github.com/karedas  
linkedin.com/in/andrea-lisi84   N 48°12'31.4" · E 16°22'38.7"

Eighteen years across the full arc of the web, from hand-built servers to cloud platform governance. Today I set technical direction for the **Tosca Cloud frontend platform** at **Tricentis**: monorepo architecture, engineering standards, and the delivery workflows 12+ product teams build with. Underneath the platform work I remain a **hands-on senior engineer**: shipping, reviewing and debugging alongside the teams I serve. I treat modern AI as **core engineering infrastructure** (agentic coding, codified agent context, gated quality), not as a demo. My job is making other engineers faster, safer and more ambitious.

Frontend Platform & Governance · Staff Scope

2023-now

Tricentis · Tosca Cloud · Vienna, Austria · Senior Software Engineer, Staff nomination in progress

Own the frontend platform architecture of Tosca Cloud: Nx monorepo orchestration, module boundaries, dependency governance and CI topology across 16 projects.

With the platform architect, form the two-person governance function for 12+ development teams: drive the RFC process and architectural standards, steer the changes that cross team boundaries, partner with UX and Security.

Drive the maintenance, modernization and scalability of the entire product: micro-frontend architecture, repo and build tooling, delivery pipelines, engineering standards, observability; bottlenecks are measured first, then engineered out.

Steward the platform all round: security and vulnerabilities, dependency upgrades, tooling adoption, design system integration, performance and best practices.

Joined as an engineer shipping features across the monorepo for two product teams; the results led to being asked to co-own platform governance with the architect.

feat/ai-augmented-engineering → merged into main

Define the architecture that integrates AI at every level of delivery: agentic coding workflows adopted by all 12+ development teams.

Wired AI into the delivery loop itself: AI-assisted PR review and pipeline checks that hold the standards line on every change.

Codified the platform's agent context: CLAUDE.md and AGENTS.md, with rule systems enforced at pipeline level and in daily dev routines.

Frontend Developer

2019-2023

Treedom · Florence, Italy · e-commerce platform for tree planting

Joined to reinforce the storefront, then helped drive the full migration away from the monolithic architecture, owning the frontend track with React, Vue and GraphQL.

Core team of four (two frontend, two backend), constantly improving product, platform and core architecture: the foundations we laid held as the company scaled from ~20 to 150+ people, with IT growing to 25 developers.

Built and evolved high-traffic campaign pages for a platform that planted millions of trees, moving the storefront to a component-driven architecture.

AI-AUGMENTED DELIVERY: HOW I WIRE IT

repo context

CLAUDE.md · AGENTS.md

agents

IDE · CI orchestration

eval gates

quality bars · AI review

main

same bar as human code

telemetry · eval results · review outcomes feed the next iteration

Agents work with the platform's context and rules baked in (CLAUDE.md, AGENTS.md, pipeline-level rule systems); every AI-generated change lands through the same standards, reviews and gates as human code. That is the governance part of the job.

Frontend Developer

Forzieri.com · Florence, Italy · luxury e-commerce

2017-2019

– Modernized a legacy ASP e-commerce end to end: an incremental migration first to jQuery, then to React with a Webpack toolchain, spanning frontend, backend and the database integration.

– Kept a live luxury shop shipping features throughout the transition, while the stack changed underneath it.

Head of Web · Full-Stack Designer

Easysystem · Figline Valdarno, Italy · web agency & IT services

2007-2017

– Hired as the studio's designer: prototypes and visual identities drawn from scratch for every client project, never assembled from bought templates (Adobe Suite).

– Grew into the on-premise infrastructure technician: servers, networking and firewalls designed and installed inside client companies, notably manufacturers in Tuscany's leather and fashion district.

– A decade owning every step for dozens of clients, from small shops to corporate: from the first sketch of a brand to the servers it ran on.

/ SIDE PROJECTS

**Lumina** · [luminamud.com](#)  
A fantasy MUD where words shape the world. Node.js, MongoDB, Socket.io, React, Cloudflare; built end to end with the same AI-augmented workflow I use at work.

**Lockhound** · [github.com/karedas/lockhound](#)  
Zero-dependency CLI (npx lockhound) that finds and kills the Windows processes locking a folder, via the Restart Manager API.

/ EDUCATION

IFTS Advanced Technical Certificate, Software Development: Java web application programmer diploma.

Diploma in Arts, Istituto d'Arte di Firenze: where the design half of this CV comes from.
