

ANDREA LISI

PLATFORM & GOVERNANCE · SENIOR SOFTWARE ENGINEER · VIENNA

Vienna, AT · remote / hybrid · lisandr84@gmail.com · linkedin.com/in/andrea-lisi84 · github.com/karedas · andrea-lisi.com

Eighteen years of code, and I started out drawing. At **Tricentis** I hold a large frontend platform together while it changes every day: the repository, the pipelines, the standards, and how the work of 12+ teams gets in. I sit between those teams as a **gateway**, and stay hands-on underneath. I treat AI as **engineering infrastructure**: the work shifted from writing to deciding, and I delegate only what I can verify.

AI IN PRACTICE

★ Deciding, more than writing

I read and correct far more code than I write

★ Delegate only what I can verify

not migrations that cannot be walked back

◆ Rules an agent can read

strict and checkable in the pipeline, because an agent does not sense them

◆ Gated like human code

agentic review on the same bar, never a softer one

◆ Claude Code

a daily driver, in the editor and in CI

WORKS WITH

React

Vue

GraphQL

Node.js

Webpack

Monorepo

Micro-frontends

CI pipelines

Platform & Governance

2023–now

Tricentis · Tosca Cloud · Vienna, Austria · Senior Software Engineer, Staff nomination in progress

– Came in building features for Inventory and the API simulation behind api-playground and api-messages, alongside the team's backend engineers, then was promoted into a team created to govern the growing platform.

– Governance of a micro-frontend monorepo: 16 projects, 12+ teams, one product. What comes in and what stays out, how it is structured, and where boundaries run.

– Maintain it at the architectural level, a two-person function with the platform architect: module boundaries, dependency graph, build times, CI topology, and what has to fail before main.

– Package upgrades and integration platform-wide, with the breakage absorbed before it reaches the teams; shared resources built once rather than per team, and bad practice taken apart.

– The gateway between design and the internal teams on standards: the RFC process, the changes that cross team boundaries, and the fix when something blocks everyone.

feat/ai-augmented-engineering → merged into main

– Our team is tasked with how the company's AI push lands across the monorepo: direction from staff engineering, the how is ours to set, for all 12+ teams.

– Adapt the codebase for a contributor that is not a person: the rules that once merely guided humans now run strict and checkable, because an agent does not sense them, it reads them.

– Integrate what earns its place, from Claude and Cursor to agentic reviews and pipeline checks, on the same gates as human code.

Frontend Developer

2019–2023

Treedom · Florence, Italy · e-commerce platform for tree planting

– Joined to reinforce two developers on the storefront, then rewrote it and drove the full migration off the monolith, owning the frontend track with React, Vue and GraphQL.

– Core team of four: the foundations we laid held as the company scaled from ~20 to 150+ people, with IT growing to 25 developers.

– Built high-traffic campaign pages for a platform that planted millions of trees, then in my last year built the backend of the internal systems from scratch, the ones the foresters run the tree operation with, inside a backend team while coming from the frontend.

Frontend Developer

2017–2019

Forzieri.com · Florence, Italy · luxury e-commerce

- Modernized a **legacy ASP e-commerce end to end**: an incremental migration first to jQuery, then to **React with a Webpack toolchain**.
- The backend came with it: a **custom CMS** that ran the orders and the daily life of the shop, down to the database integration.
- Kept a live luxury shop shipping features throughout the transition, while the stack changed underneath it.

0a1n1t

Head of Web · Full-Stack Designer

2007–2017

Easysystem · Figline Valdarno, Italy · web agency & IT services

- Hired as the studio's designer: **prototypes, print work and visual identities drawn from scratch** for every client project, never assembled from bought templates (Adobe Suite).
- Grew into the **on-premise infrastructure technician**: servers, networking and firewalls designed and installed inside client companies, notably manufacturers in Tuscany's leather and fashion district. I learned networking with my hands on it.
- A decade owning **every step for dozens of clients**, from small shops to corporate: from the first sketch of a brand to the servers it ran on.

/ HOW I WORK

Architecture is a visual matter, and a matter of respect for the reader.

I come from art school, and the order of a codebase is not a theoretical nicety: the way the folders and the dependencies are laid out tells me straight away whether a project is healthy or a maze. Even on a quick prototype I set clean logical boundaries from the start.

Direct and horizontal.

Hard technical problems get solved with clarity and honesty, not with titles on paper. Having run everything from print artwork to installing company firewalls, and having worked in structured international settings, I know the best solutions turn up when the hierarchical filters come down.

If a rule matters, a machine checks it.

I don't believe in the hero developer, and a project's stability should not depend on my memory or on my being around. When the team settles on a convention, my first move is to automate it: a linter, a pipeline test, a script that maps the dependency graph.

/ SIDE PROJECTS

Lumina · luminamud.com

A fantasy MUD where words shape the world. Node.js, MongoDB, Socket.io, React, Cloudflare; built end to end with the same AI-augmented workflow I use at work.

Lockhound · github.com/karedas/lockhound

Zero-dependency CLI (npx lockhound) that finds and kills the Windows processes locking a folder, via the Restart Manager API.

/ EDUCATION

IFTS Advanced Technical Certificate, Software Development: Java web application programmer diploma.

Diploma in Arts, Istituto Statale d'Arte di Firenze. Drawing first, then years of the violin. I never stopped, and it is where the design half of this CV comes from.
