STAFF FRONTEND ENGINEER · VIENNA

Vienna, Austria · remote / hybrid lisandr84@gmail.com www.andrea-lisi.com github.com/karedas
linkedin.com/in/andrea-lisi84 N 48°12'31.4" · E 16°22'38.7"

Eighteen years across the full arc of the web, from hand-built servers to cloud platform governance. Today I set technical direction for the **Tosca Cloud frontend platform** at **Tricentis**: monorepo architecture, engineering standards, and the delivery workflows 12+ product teams build with. Underneath the platform work I remain a **hands-on senior engineer**: shipping, reviewing and debugging alongside the teams I serve. I treat modern AI as **core engineering infrastructure** (agentic coding, codified agent context, gated quality), not as a demo. My job is making other engineers faster, safer and more ambitious.

EXPERIENCE	FOCUS	WORKFLOW	DISPOSITION
18+ years	Platform & governance	AI-augmented	Pragmatic, no hype

AI IN PRACTICE

★ Agentic engineering

Claude Code · Cursor · Copilot as daily drivers, IDE and CI

★ Prompt & context engineering

repo-aware context systems, guardrails

◆ Agent context design

CLAUDE.md · AGENTS.md · rules at pipeline and routine level

◆ RAG & embeddings

retrieval over docs and codebases

◆ LLM APIs & evals

Anthropic · OpenAI · quality gates in CI

◆ AI security

Frontend Platform & Governance · Staff Scope

2023–now

Tricentis · Tosca Cloud · Vienna, Austria · Senior Software Engineer, Staff nomination in progress

– Own the frontend platform architecture of Tosca Cloud: Nx monorepo orchestration, module boundaries, dependency governance and CI topology across 16 projects.

– With the platform architect, form the two-person governance function for 12+ development teams: drive the RFC process and architectural standards, steer the changes that cross team boundaries, partner with UX and Security.

– Drive the maintenance, modernization and scalability of the entire product: micro-frontend architecture, repo and build tooling, engineering standards, observability (APM, tracing, error budgets); bottlenecks are measured first, then engineered out.

– Re-engineered the CI/CD pipelines, migrating from Azure DevOps to GitHub: build and test times cut by more than half, with dramatically faster deploys across the suite.

– Joined as an engineer shipping features across the monorepo for two product teams; the results led to being asked to co-own platform governance with the architect.

feat/ai-augmented-engineering → merged into main

– Define the architecture that integrates AI at every level of delivery: agentic coding workflows adopted by all 12+ development teams.

– Wired AI into the delivery loop itself: AI-assisted PR review and pipeline checks that hold the standards line on every change.

– Codified the platform's agent context: CLAUDE.md and AGENTS.md, with rule systems enforced at pipeline level and in daily dev routines.

Frontend Developer

2019–2023

Treedom · Florence, Italy · e-commerce platform for tree planting

– Joined to reinforce the storefront, then helped drive the full migration away from the monolithic architecture, owning the frontend track with React, Vue and GraphQL.

– Core team of four (two frontend, two backend) for the architectural transition: the foundations and structure we laid supported the growth to 25 developers across multiple teams.

– Built and evolved high-traffic campaign pages for a platform that planted millions of trees, moving the storefront to a component-driven architecture.

quality bars · AI review

main

same bar as human code

telemetry · eval results · review outcomes feed the next iteration

Agents work with the platform's context and rules baked in (CLAUDE.md, AGENTS.md, pipeline-level rule systems); every AI-generated change lands through the same standards, reviews and gates as human code. That is the governance part of the job.

0alinit

Frontend Developer

Forzieri.com · Florence, Italy · luxury e-commerce

2017-2019

Modernized a legacy ASP e-commerce end to end: an incremental migration first to jQuery, then to React with a Webpack toolchain, spanning frontend, backend and the database integration.

Kept a live luxury shop shipping features throughout the transition, while the stack changed underneath it.

Head of Web · Full-Stack Designer

Easysystem · Figline Valdarno, Italy · web agency & IT services

2007-2017

Hired as the studio's designer: prototypes and visual identities drawn from scratch for every client project, never assembled from bought templates (Adobe Suite).

Grew into the on-premise infrastructure technician: servers, networking and firewalls designed and installed inside client companies, notably manufacturers in Tuscany's leather and fashion district.

A decade of end-to-end ownership across dozens of clients, from small shops to corporate: design, full-stack delivery and Windows Server operations.

/ SIDE PROJECTS

Lumina · [luminamud.com](#)

A fantasy MUD where words shape the world. Node.js, MongoDB, Socket.io, React, Cloudflare; built end to end with the same AI-augmented workflow I use at work.

Lockhound · [github.com/karedas/lockhound](#)

Zero-dependency CLI (npx lockhound) that finds and kills the Windows processes locking a folder, via the Restart Manager API.

/ EDUCATION

IFTS Advanced Technical Certificate, Software Development:

Java web application programmer diploma.

Diploma in Arts, Istituto d'Arte di Firenze: where the design half of this CV comes from.
